DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17 are drawn to an image processing apparatus for character/line discrimination comprising various processing sections not found in the other claims.
- II. Claims 18-25 are drawn to an image processing apparatus for color discrimination comprising various processing sections not found in the other claims.
- III. Claim 26 is drawn to an image processing apparatus for character/line discrimination and color discrimination not comprising all the processing sections found in the other claims.

The inventions are distinct, each from the other because of the following reasons:

Inventions III is related to Invention I & II as combination and subcombinations. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of either the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombinations as indicated above. The subcombination has separate utility such as for performing a simple character/line discrimination and color discrimination in an image processing apparatus to allow

selection of proper processing to be carried out on the image data prior to printing the image data.

The combination claim 26 is an evidence claim, which indicates that the combination does not rely upon specific details of either of the subcombinations for patentability. If the evidence claim is subsequently found to be unallowable, the question of rejoinder of the inventions restricted will be considered.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, both invention I and II have separate utility such as performing a series of operations to ultimately perform a character/line discrimination (invention I) or a color discrimination (invention II) in an image processing apparatus to allow proper processing to be carried out on the image data prior to printing. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, and the search for either Group I or II is not required for Group III, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
